

**States does it.**

# GOOD DESIGN IS ELEMENTAL

When manufacturing a quality hardwood panel, the elements you leave out are as important as the elements you put in.

Veneer-core panels carrying the SoyStrong label are free from all formaldehyde resins and are designated NAF for No-Added-Formaldehyde. MDF and particleboard substrates with the SoyStrong label are

No-Added-Urea-Formaldehyde. Using 100% soy-based adhesives, all SoyStrong panels exceed California Air Resource Board and USGBC LEED Criteria.

**Ask for SoyStrong** products by name to ensure your next design project is safe, environmentally friendly and custom engineered to your precise specifications.

States is 100% committed to soy-based adhesives. When you need veneer-core panels, you can confidently choose States SoyStrong panels, which are free from formaldehyde resins and are designated NAF for No-Added-Formaldehyde.

## A commitment to green principles and products

**1992**

States was the first production panel manufacturer to be FSC® certified

**2004**

Received Sustainable Forestry Institute Certificate

**2004**

Successfully sourced a formaldehyde-free adhesive

**2008**

Shipped the first soy-bonded NAF panels

**2012**

100% conversion to a soy-based resin adhesive containing no formaldehyde

**2014**

Earned CARB exemption for virtually ALL products produced

## Substrates Engineered to Match Every Application

**ApplePly**

**ApplePly** is specified for its attractive edge, high strength and solid hardwood core. It is widely used in retail fixtures, contemporary furniture and architectural interiors, where its attractive edge is incorporated as a design element.

**ARMORCORE**

**ArmorCore** combines composite crossbands with veneer innerplies to produce an exceptionally flat, smooth surface. Specify ArmorCore when your panel needs to have the weight, structural value and screw-holding ability of veneer core with the superior flatness and higher density of MDF.

**Veneer Core**

**Veneer Core** panels may be laminated in one step for maximum economy or constructed and sanded to a metered tolerance. Veneer Core Panels are lightweight, high in dimensional stability and bending strength and hold screws better than most other substrates.

**Composite Core**

**Composite Core** panels include particleboard and MDF of several densities. Composite cores are valued for their flat, smooth surfaces and tight tolerances, as well as their relatively low costs.

# NOVA: A PERFECT FINISH EVERY TIME

High-quality, beautiful NOVA® flatline finishes bring out the natural warmth of real wood-grain surfaces. Hardwood panels prefinished with NOVA UV-cured coatings are ready to be fabricated without additional surface treatment. This saves time, lowers costs and ensures a consistent, durable finish.

NOVA finishes are available in a wide range of options and can be combined as needed for specific applications.

## NOVA Prefinished Panels for Unmatched Beauty & Durability

The NOVA® line of UV-cured coatings offer you prefinished options tailored to your specifications. Choose from clear, translucent, opaque and printed finishes.

Gloss levels include satin, medium, high or custom with precise color matching for your specific application.

# CUSTOM PANELS BUILT TO YOUR SPECIFICATIONS

Every part of a States panel can be created to match your precise specifications. Whether you need small quantities suitable for a custom remodel or large quantities for use in commercial applications, you can have confidence specifying States panels for your next project. Our proprietary manufacturing process allows you to customize every detail about your panel, from the substrate to the veneer species to the color and unique properties of its NOVA finish.

### Veneer Selection

Many factors determine the appearance of wood veneers used in States' panels. Characteristics to consider include species, veneer matching, grade and cut.
